## Decision Making Framework

Tauranga City

# DECISION-MAKING FRAMEWORK

## WHAT IS THE DECISION-MAKING FRAMEWORK?

This framework brings together all of the information and aspirations that the Council and the community have for their city, and helps to guide decisions that Council makes for the city both now and into the future.

The decision-making network is made up of:

### 1. Community Outcomes

These statements express the desired future state of the city and were developed through the Tauranga City Council – City Vision process. Council is just one of a number of organisations that influence the ability to work toward these outcomes.

The development of community outcomes is a requirement of the Local Government Act 2002.

### 2. Strategies and Plans

This is the strategic direction in place to help guide what needs to be done in specific areas such as the City Centre, transportation and open space. There are often a number of organisations responsible for delivery depending on the strategy and the role of Council in delivery of this.

### 3. Activity Area Plans

These plans are in place to help describe all the different services or activities provided by Council, and how each activity helps to deliver on the community outcomes, strategies and plans in place.

### 4. Council Commitments

This describes the way that Council will work to contribute to the community outcomes.
